SUMMARY

Final-year Computer Science student at Chandigarh University and a full-stack developer with hands-on experience building web applications using the MERN stack. Skilled in JavaScript, React.js, Node.js, Express.js, MongoDB, REST APIs, authentication systems, and database management. Beyond just building, I take a genuine interest in the fundamentals — Data Structures & Algorithms, Operating Systems, DBMS, and software design patterns. I've solved 200+ problems across LeetCode and GeeksforGeeks and believe that strong engineering comes from understanding the layers beneath the frameworks.

EDUCATION

Chandigarh University, Mohali

Jul 2022 – Jul 2026

B.E. Computer Science & Engineering — CGPA: 7.81

Army Public School, Lucknow

Apr 2021

Class XII (CBSE) — 90.8%

PROJECTS

GitLens Explorer

MongoDB · Express.js · React.js · Node.js · GitHub REST API · AI APIs

- ▶ Built a MERN stack developer tool that fetches the complete directory structure of any public GitHub repository using the GitHub REST API and renders it as an interactive, navigable tree.
- ▶ Generates an AI-powered natural language summary of the entire codebase on load, giving developers instant context before reading a single line of code.
- ▶ Clicking any file or folder triggers a detailed summary with line-by-line explanations cross-referenced to their exact location within the project structure.
- ▶ Surfaces a ranked list of the most important files to explore first, significantly reducing onboarding time for new contributors.
- ▶ Currently building: GitHub Issues integration to fetch open issues and auto-generate AI-powered fix templates, streamlining the open-source contribution workflow.

BlessingBridge — Social-Impact Donation Platform

MongoDB · Express.js · React.js · Node.js

- ▶ Designed and built a crowdfunding platform for mentally disabled and elderly ashrama residents and differently-abled school children, discoverable by birthday.
- ▶ Donors can give on personally meaningful dates — their own anniversaries, milestones, or special occasions — and set reminders to build consistent, recurring giving habits.
- ▶ Implemented a sustainable revenue model via a micro-commission on each donation and optional on-site advertising to ensure long-term platform viability.

Real-Time Chat Application

Node.js · WebSocket · HTML · CSS · JavaScript

- ▶ Built a multi-user real-time messaging system using the native WebSocket protocol with Node.js — no heavy frameworks — supporting multiple concurrent users with instant message broadcasting.
- ▶ Lightweight, dependency-minimal frontend demonstrating a solid understanding of persistent TCP connections and event-driven server architecture.

TECHNICAL SKILLS

Proficient: JavaScript, Node.js, Express.js, React.js, MongoDB, REST APIs, HTML, CSS, C++, C, Data Structures & Algorithms

Familiar: MySQL, Redis, JWT, WebSocket, Git, GitHub, Postman, Java

Concepts: MVC Architecture, DBMS, Operating Systems, Scalability, Event-Driven Design, Software Design Patterns

ACHIEVEMENTS & CERTIFICATIONS

- ▶ Solved 100+ problems on LeetCode and 100+ problems on GeeksforGeeks, strengthening core DSA and problem-solving fundamentals.
- ▶ Databases and SQL for Data Science with Python — IBM (Mar 2024)
- ▶ Introduction to Databases — Meta (Mar 2024)
- ▶ SQL: A Practical Introduction for Querying Databases — IBM (Mar 2024)
- ▶ Cloud Computing — NPTEL (Score: 82/100) | Internet of Things: Design Concepts and Use Cases — NPTEL (Score: 90/100)
